

For my final proposal, I plan on building an Image Slider using HTML, CSS, and JS. For this Image Slider, users will be able to click on the left or right buttons to go through a set of images, and I also plan on including a short description for each image.

Wireframe

TODO List

- Write **standards-compliant JS** that functions.
- Make use of both Array and Object Data structure
- Make use of **both Array and Object** data structures
- Make use of at least **TWO conditional statements**
- Make use of either **Functions or Classes** to organize code.
- Make use of at least **TWO Event listeners** and handlers to respond to user interaction.
- Perform at least **TWO string modifications/replacements** and Proper **DOM traversal**

Project Overview

Name Site: Image Slider.

Design Concept: Food images, simple design, and description of each images.

Audience: Anyone can use the slider.
